Fixed 20% PCM test | 50 visual examples

10 randomly selected held-out images from each of 5 categories

Ground truth | Zero-filled | SPGL1 BP | GS-PnP | U-TV C60 | Old clean U-TV

01. Fixed 20% multilevel Hadamard subsampling, coarse J=6.

02. Fixed NPL-default sigma parameters for every image.

03. Random mask and noise trace per image; same measurement used by all solvers.

04. SPGL1 basis pursuit: db4, 100 iterations and 10 debias iterations.

05. GS-PnP: GS-DRUNet pretrained preset, up to 50 iterations.

06. U-TV C: noise-trained 3 x 56 U-Net, epoch 60, 512 unrolled iterations.

07. Old U-TV: clean-trained 2 x 8 U-Net, epoch 99, 256 unrolled iterations.

08. Full test: 450 images and one acquisition per image, seven reconstruction methods.

09. PSNR and SSIM use raw images; LION HaarPSI clamps negative values internally.

10. All image displays use the shared PCM AFM hot colormap on fixed intensity [0,1].

11. The comparison tests full models, not noise training in isolation.

CIGS: selected test images 1-4 of 10 | fixed 20%, NPL default
